EMPLOYMENT

Postdoctoral Associate, Tobin Center for Economic Policy, Yale University

July 2021–Present

EDUCATION

PhD, The Wharton School, University of Pennsylvania

2021

BS, Cornell University, with Honors

2010

JOB MARKET PAPER

Competition in Employer Sponsored Health Insurance: Implications for a Public Option

156 million Americans obtain health insurance through an employer. High premiums and concerns about access have led to proposals to introduce a “public option,” where the government would provide a public insurance plan to compete with existing private insurers. This paper explores the conditions under which a public option generates additional premium competition in the insurance market. In the absence of an existing public option to study, I combine data on employer-insurer contracting and a structural model of supply and demand to predict market outcomes under various assumptions about the cost and quality of the public insurance plan. Because insurers in the employer-sponsored market can price discriminate, adverse selection can play a key role in determining the impact of a public option that is limited in its ability to set employer-specific premiums. A public option has the largest impact on the private market when it uses its regulatory power to lower underlying costs in setting payments to health care providers. Even a public option that obtains substantial market share does little to lower premiums for employers who remain in privately insured because these employers strongly prefer their private insurer, have large switching costs, or receive risk-rated premium offers that dominate those available through the public option.
